AutoCAD is the flagship product of Autodesk's Architectural and Engineering (A&E) Suite of software. A&E Suite products include AutoCAD Architecture (A&E Architecture) and AutoCAD Mechanical (A&E Mechanical). A&E Suite also includes Civil 3D (A&E Civil 3D) and AutoCAD Map 3D (A&E Map 3D). Like other CAD applications, AutoCAD is used by professional architects and engineers to draw, sketch, and plan designs. Professional usage is often in conjunction with specialized software such as AutoCAD Architectural Desktop (A&E Architecture), AutoCAD Mechanical Desktop (A&E Mechanical), AutoCAD Electrical Desktop (A&E Electrical), AutoCAD Plant 3D (A&E Plant 3D), and AutoCAD Map 3D (A&E Map 3D), and specialized hardware such as a CAM (computer-aided manufacturing) device. In addition, A&E Suite products are used by engineers, designers, draftsman, and other non-architectural professionals in a wide range of other industries such as construction, manufacturing, product design, and utilities. The current iteration of AutoCAD is version 2018. Current release numbers are a count of the major version plus the minor release number, which increases annually. Current minor release numbers are 9.0, 8.0, 7.0, and 6.0. New products and updates to existing products are released each year. New features and functions are gradually added to AutoCAD in yearly or biannual updates. As features are added, some existing features may be removed. AutoCAD is also used for cross-platform document sharing and collaboration over a network, and to generate printable, screen-ready documents. AutoCAD may be used for producing architectural blueprints. AutoCAD Architecture allows AutoCAD users to create 3D plans, drawings, and views of architectural projects, in a format that will render and print the project accurately on paper. History AutoCAD is a continuation of the AutoLISP product Autodesk developed for the MIT CADLab. The MIT CADLab was a research laboratory at MIT, opened in 1970 by professors at the MIT Media Lab to explore the potential of new technologies. In the early 1970s, it was a prototype environment for the future Autodesk CAD software. The first AutoCAD prototype was used by

The Autodesk Community Praying for Spiritual Growth December 10, 2017 Are you growing spiritually? Do you make time to pray for yourself? Do you make time to pray for those in your life? Here are some ways to cultivate a closer relationship with God. 1. Pray in the car: It's never too late to start. First, remember the importance of prayer and then talk to God on your way to or from work, school or wherever you need to go. Pray that God will provide for your needs. It also can be helpful to pray ahead of time and ask God for guidance in your decision. 2. Pray in the shower: That's right. Even in the morning shower we have an opportunity to pray. There is no better way to start your day than by praying with or to God. You can do a quick prayer, a long prayer or even take time to pray as part of a specific meditation. You can pray for the day, the week, the month and even the year ahead. 3. Pray while doing chores: You can pray while cleaning the house, shopping or preparing meals. Prayer can be a great "break" from whatever you are doing and will give you a moment to still your mind. There is no better time to meditate on God. 4. Pray when you are watching TV: We are always watching something. It can be a good time to pray. Remember to state your requests before the program or movie starts and ask God to guide you through the program. 5. Pray when you are visiting friends and relatives: This is a great time to pray. Our hosts or the loved one may have a prayer need or you can share with them about your daily needs. 6. Pray on your lunch hour: Sit at your desk and state your requests or make a plan for the week. 7. Pray before going to bed: This is the best time to be alone with God. Set aside at least one hour each night to do nothing but pray. 8. Pray before meals: We spend a lot of time at the table. Make this a time to pray about whatever you are about to eat. 9. Pray
