AutoCAD is best-known as a 2D drafting and design application, but it can be used for all types of 3D modeling and 2D drafting and design, as well as 2D and 3D computer-aided design (CAD) model rendering. Unlike a CAD program designed to help model and plot 3D objects, AutoCAD focuses on 2D drafting and design. AutoCAD allows the user to create a series of 2D drawings and an associated database to store and retrieve the drawing data. Features Key features of AutoCAD include the following: Polylines: Maintain an unbroken path of connected line segments. Fills and Shapes: Create filled or outlined shapes. Text: Write and edit text. Curves: Draw 2D curves. Dimensions: Create and edit dimensions. Marks: Draw and edit marks. Smart tips: Draw with ease and speed. PDF: Generate PDF files from drawings and drawings sets. Collaborate: Share and work in groups with team drafting. Data management: Manage your drawing files. File management: Manage and view all of your drawing files. Exporting: Generate, save, and print to a variety of file formats. Viewing and editing: View and edit drawings. Printing: Print documents to paper or digital devices. Drawing templates: Create, edit, save, and view drawing templates. The key features and characteristics of AutoCAD are summarized in the table below.

I need to split a string into words, but the string may contain hyphens - or not. For example: "This-is-a-test-string" should become ["This-is-a-test-string"] The string may contain - or no hyphens at all: "This-is-a-test-string" should become ["This-is-a-test-string"] but it should ignore strings like this: "test string" because that string contains hyphens, but I don't need them. How can I accomplish this in PHP? Is

this even possible? A: explode() can do this: \$str = explode(' ', 'This-is-a-test-string');
var_dump(\$str); Output: array(1) { [0] => string(12) "This-is-a-test-string" } Note: The empty elements are not kept in the resulting array. You'll have to use a loop over \$str, or manipulate the array beforehand. A: function explode_any(\$string, \$delimiter = '-') {
\$delimiter = '-'. \$delimiter; \$output = explode(\$delimiter, \$string); \$first_delimiter = false;
foreach(\$output as \$i => \$item) { if(strlen(\$item) > 0 &&!strpos(\$item, '-')) { a1d647c40b

What's New In AutoCAD?

Use the AutoCAD Markup Assistant to create an electronic version of a paper drawing, that you can send or distribute. Changes automatically flow from the paper drawing into the electronic one. (video: 1:05 min.) Markup tools: It is now easier than ever to make edits on designs with AutoCAD's visual markup tools. Use the visual editing tools to quickly switch between views and quickly zoom out to see your entire drawing. (video: 1:07 min.) Use the visual drawing tools to make changes without leaving the paper. Review the edits you've made and incorporate them into your drawing. (video: 2:17 min.) Keyboard Shortcuts: Shift + F6 increases the font size. Shift + Spacebar reduces the font size. Shift + F5 decreases the font size. (video: 0:49 min.) The previously fixed keyboard shortcuts are now back to working with the mouse. Previously, when you assigned keyboard shortcuts to commands, the command would pause. Now, the keyboard shortcuts will only pause when your keyboard is not being used. If you keep pressing keys, the shortcut works. If you stop pressing keys, the shortcut stops. (video: 0:15 min.)
