A conventional cartridge-type gas tube for a gas discharge lamp, such as a fluorescent lamp, is made of a metallic housing of, for example, aluminum alloy and is provided with a tubular wall portion which is formed with a tubular discharge window at its peripheral portion thereof and also with a plurality of fine metallic needles which are securely fixed in the tubular wall portion. These needles each has a first portion extending from the tubular wall portion and a second portion bent in the form of a mushroom, the first portion being formed with an outside threaded portion and the second portion being formed with an inside threaded portion of a female screw. When the outer periphery of the gas tube is pressed and fitted into a socket of a fluorescent lamp to be used in the lamp, the metallic needles are inserted into the inner periphery of the socket to be located with respect to an axis of the gas tube. The metallic needles have a function to deform the tubular wall portion by its elastic force, thereby allowing the insertion of the gas tube into the socket. In the above mentioned conventional gas tube, the metallic needles are arranged in the tubular wall portion in the direction of the axis of the gas tube. The density of the needles in the vicinity of the peripheral end of the tubular wall portion is lower than that of the others, so that the peripheral end of the tubular wall portion tends to be pressed against the socket. This means that the tubular wall portion is difficult to be deformed to form a bent portion at the peripheral end of the
