AutoCAD - a word about first impressions The first impressions of Autodesk's AutoCAD suite are built around a large, unified interface that removes the need for a lot of manual steps. Drawing and editing components are presented within a single window, including the ability to zoom in and out of the view to suit specific needs. To complete a drawing, a user may select different drawing commands from the menu bar at the top of the screen and draw objects, move them around and alter their properties. Once a drawing is finished, it is saved as a DXF file (the native file format for AutoCAD). DXF files can also be imported into AutoCAD, and are the native file format for AutoCAD LT, another AutoCAD-compatible application. DXF files are commonly used to exchange geometry, schematics, and other CAD files between users. The ability to create and import DXF files is an important reason to use AutoCAD. Getting started with AutoCAD If you do not have AutoCAD yet, a free 15-day trial can be downloaded from AutoCAD.com. This includes access to the entire AutoCAD suite, which has over 20 drawing and utility components. This guide assumes that you already have AutoCAD installed. To start AutoCAD, choose Help > AutoCAD Setup from the menu bar, click System Requirements, and follow the instructions. AutoCAD 2016 for Mac OS X The latest version of AutoCAD is compatible with macOS 10.13 High Sierra. If you have installed AutoCAD 2016 and have problems, check the AutoCAD forums for answers. The problem is that I am also using jquery and when the script is loaded it fires an alert message. I do not want the alert message to fire. Is it possible to change the default javascript alert message or am I going to have to create my own? Thanks A: Just use a function in front of alert.
